

Gian Trujillo | Full-Stack JavaScript Developer

Guadalupe, Nuevo León, México

Tel: +(52)81-1037-9315 | Email: giantrujillo98@gmail.com

<https://www.linkedin.com/in/gian-trujillo/> | <https://github.com/gian-trujillo>

Creative MERN stack developer (Junior), with a great capacity to learn new concepts and solve technical problems. Passionate about the art of web design, my personal challenge is to create sites with a responsive, interactive interface, optimized for greater fluidity and user experience.

Projects/Experiences:

Around the US | October 2025

The 'Around the US' website was developed with React and allows users to add/delete cards and edit user information. It uses its own backend for user authentication (JWT) and data handling (NoSQL), which was developed with Express and MongoDB.

Technologies: HTML, CSS, JavaScript, React, Node, Express, MongoDB

Git Repository: https://github.com/gian-trujillo/web_project_api_full.git

Skylens Photography Services | May 2026

Skylens contains photography services, editable by an authorized administrator. The frontend was built with React and responds efficiently to requests from the backend, which was developed in Express using MongoDB for data storage from external API resources (Cloudinary and Resend).

Technologies: HTML, CSS, JavaScript, React, Node, Express, MongoDB

Git Repositories: <https://github.com/gian-trujillo/backend.git> | <https://github.com/gian-trujillo/frontend.git>

Triple Peaks Library | February 2025

Using only HTML and CSS, the Triple Peaks Library simulates a real library membership, complete with library staff information, honors women in astrophysics, and includes steps on how to subscribe. It also includes library hours and links to their social media.

Technologies: HTML, CSS, Figma

Customer Service | October 2020 – November 2021

- Relayed contract terms and conditions to new customers to reduce incoming calls related to technical problems and/or breach of contract.
- Examined the production and functionality of solar systems before coordinating technical visits, reducing the amount of technical work by more than 50%.
- Documented details of each call and categorize them as sales, resolved, scheduling of technical visit, among other categories, maintaining order and good coordination between my colleagues and technicians in the field.
- Trained new agents on how to make effective calls, minimizing the number of technical visits generated.

Skills:

HTML | CSS | JavaScript | REST API | React | Node | Express | MongoDB | Git

Education:

Bootcamp in full-stack web development | TripleTen

Technologies: HTML | CSS | JavaScript | Rest API | React | Node | Express | MongoDB

Bachelor's Degree in Chemistry | University of Belize

Skills: Laboratory Instrumentation | Chemical Handling | Chemistry Problemsolving
