As a MERN stack developer, I am skilled in React, Node, Express and MongoDB for full development of SPAs. I have completed an intensive bootcamp at TripleTen, where I have been prepared to tackle full stack rolls, while my attention to detail contributes to the responsiveness and optimization of my projects for a better user experience.

Experiences

Customer Service Agent

The Office Gurus | October 2020 – November 2021

- Relayed contract terms and conditions to new customers to reduce incoming calls related to technical problems and/or breach of contract.
- Examined the production and functionality of solar systems before coordinating technical visits, reducing the amount of technical work by more than 50%.
- Documented details of each call and categorize them as sales, resolved, scheduling of technical visit, among other categories, maintaining order and good coordination between my colleagues and technicians in the field.
- Trained new agents on how to make effective calls, minimizing the number of technical visits generated.

Chemistry Tutor

SEPA | December 2022 – April 2023

- Preparation of customized classes and activities to train high school students in the areas of chemistry, English, and mathematics, increasing the possibility of passing their next exam.
- Reviewed and corrected exams of students who need help to improve their school grades.

Projects

Around the U.S.

TripleTen

- Developed a responsive and easy-to-navigate interface using my knowledge of the JavaScript framework, React.
- Implemented a registration and login system using Node and Express which returns a JWT token that is stored in local storage.
- Used MongoDB (NoSQL) to store user information and the URL of each card created by the user.
- Applied styles to elements using CSS to give visual user feedback indicating the functionality of the elements.
- Deployed the project to Google Cloud so that it is available on the internet.

Skylens Photography Services

TripleTen

- Created forms, drop-down menus, and interactive elements using the JavaScript framework, React.
- Designed a login system for a single administrator using React on the frontend and Node with Express on the backend, which returns a JWT token that is saved in local storage to facilitate administrator login.
- Connected the project to the Cloudinary API to store images and videos, allowing for a faster and smoother site.
- Used MongoDB for Cloudinary data storage and administrator information, which allows the main content to be editable.
- Connected the forms to the Resend API so that the administrator receives the information provided by users directly to their email address..

Education

Chemistry (Bachelor's Degree)

August 2016 – June 2020

University of Belize

Full stack JavaScript Developer

November 2024 – May 2026

TripleTen – Bootcamp

Skills

- JavaScript
- React
- Node
- Express
- MongoDB
- REST API
- HTML
- CSS
- Git
- GitHub
